

SATELLITE INSTALL & OPERATIONS

ASTAC constructs new Satellite Earth Stations in some of the most remote locations in Alaska. Strategic planning, procurement, and logistics are needed to acquire and ship the right equipment to these sites and build a turnkey satellite system. We have built strong relationships with equipment vendors both local and in the Lower 48, spectrum and licensing experts, and our technicians are experienced in both building and operating these sites in the harshest of climates. ASTAC knows how critical a reliable connection is in remote Alaska, and when satellite backhaul is the only option, quality design and installation is key to success.
